

# Software Citation Sprint

- Aim: As a life science research software developer , I would like to submit a software citation using existing open software tools to a publication, in order to make my software citable and trackable to life science funders and reusable by other life science researchers
- Solution: To provide a web interface for developers and publishers to use to either invite citation or prepare citation without going directly to zenodo
  - Provides ease of editing metadata
  - Provide rich metadata for zenodo
  - Enables help with generation of citation file in readme within github
  - Address “chicken and egg” problem with DOIs in software publication process with zenodo

# Prototype :
