BEFORE YOU START USING FAUSTLIVE

STEP 1 : Configure File Associations

Why would you do that ?
   To ensure that your system is well configured for .dsp, .lib and .svg and doesn't go crazy when FaustLive tries to open this kind of files.

1- Go to the folder « FilesToConfigure »
2- For each file :
   a. Right Click on the file
   b. Choose « Open With »
   c. Check « Use this application for all »
   d. Choose the default application with which the file will be opened
      (a **text editor** for .dsp and .lib ;
        a **browser** for .svg)

STEP 2 : Use FaustLive

1- Got to the Folder « FaustLive »

2- Launch the installer « setup_FaustLive »

3- Start using it =)

KNOWN BUGS :

1- Foreign functions cannot be used

2- Snapshots from FaustLive-1.0 are not compatible with FaustLive-2.0
3- Snapshots are not archived in a .tar but only availble as folders. When you recall a snapshot, you have to the parent folder (ex : « MySession ») and not enter it

4- If you are using http control, make sure that your firewall authorizes FaustLive

5- OSC control can show bugs when used with multiple control devices
